Proprietary Certificate

To Whom it may Concern:

"Teleflex Medical", having office at IDA Business and Technology Park, Dublin Road, Athlone, Ireland hereby confirms and verifies that following:

1. "Teleflex Medical" owns all the rights title and interest in the patents, trademarks, trade names, inventions, copyrights, know how, trade secrets and any other intellectual property of LMA Proseal, the original LMA invented and designed by Dr. Archie Brain, which fall under Supraglottic Airway Device category to help in all areas of oral anaesthesia and providing ventilation requiring respiration. LMA Proseal is available in extensive range of sizes starting from smallest available i.e. Size 1 with built-in drain tube designed to channel fluid away and permit gastric access. The following are the details of the /product:
 - A laryngeal-mask airway reusable device including provision for drainage of the oesophagus comprises an inflatable main-cuff and a backplate having a laryngeal-side and a pharyngeal-side
 - During the slow increase of pressure this LMA withstands an oesophageal pressure up to a median of 58cm H (2) O
 - The backplate also has an external tube-joint adjacent to the proximal region of the main-cuff. The backplate is hermetically bonded to the periphery of the main-cuff establishing separation between a laryngeal-chamber region and a pharyngeal region.
 - A distally open evacuation tube includes a distal portion which longitudinally traverses (crosses) the interior of the distal region of the main-cuff in sealed relation therewith for operative engagement and communication with the inlet of the oesophagus.
 - The evacuation tube traverses the laryngeal-chamber region generally adjacent to the laryngeal-side of the backplate and passages through a proximally located tube-joint to the pharyngeal region.
 - An airway tube also extends into the tube-joint for communication with an airway port to provide a flowpath between the airway tube and laryngeal-chamber region.
