CME & Workshop on Allergy and Childhood Asthma

16th February 2019

आरोग्यम् सुखं सम्पदा

Organized by:

Department of Pediatrics,

All India Institute of Medical Sciences Raipur (C.G.)

Prelude:

Asthma and Allergic disorders are one of the leading cause of hospitalization for children, it is one of the most important chronic conditions causing elementary school absenteeism. It has also increased the number of preventable hospital emergency visits and admissions.

As per the Global Asthma report ,since 1970, prevalence of bronchial asthma has increased and now it affects an estimated 4-7% of people worldwide It is estimated that 14% of children in the world experience asthma symptoms. Food allergies are also being recognized in more and more children.

These chronic disease have a huge economical and psychological impact due to the associated morbidity and sometimes cause mortality. With newer insight and diagnostic techniques management has become more easier but very few options for cure. At the same time newer challenges are coming up with recognition of various phenotypes of asthma. Under 5 wheezing remains a grey area. To improve the care provided to these young buds we have organized this CME where erudite experts will share their knowledge and experience with us. This will be of benefit to all of us and help in better health care to our patients.

All those who are involved in providing health care to those with respiratory and allergic diseases like Pediatricians, Pulmonologist, ENT specialist, General Physicians are invited to be part of this academic event.
